Introduction

I am Introduction

The Experiment

General gist, compare a*(combo) DIKSTRAS(bredth) and greedy first(depth) with varying maze algorithms. compare execution time and then also compare length of paths. Here are the maze algorithms we will compare(reference to maze book/website)

1. backtracker(classic)
2. hunt and kill(cause i like this)
3. binary tree(think greedy will be good st this)
4. other ones, with heuristics and twisty stuffs

Results

Analysis

Conclusion
